A Dutch–U.S. Dialogue on Governance Capacity for Extreme Heat: Workshop

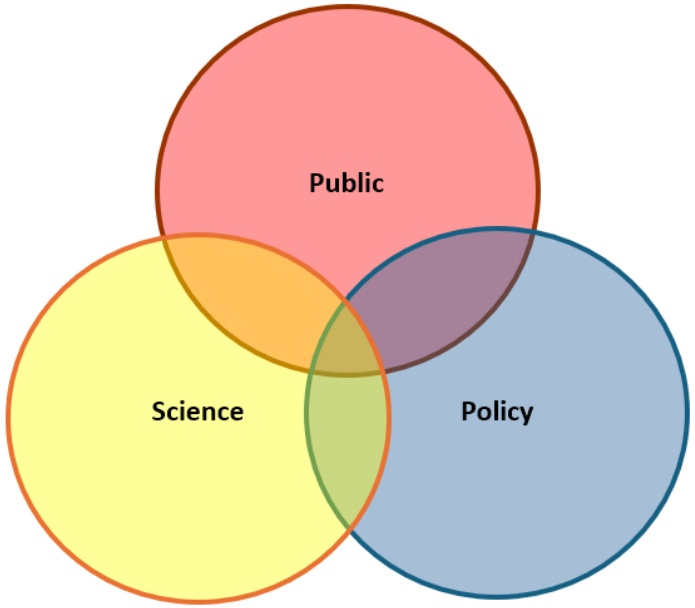

Aim

Identify which governance capacity factors most influence local ability to assess heat vulnerability and implement adaptation measures, through a structured Dutch–U.S. workshop.

Workshop format

1) What heat-risk challenges are we trying to govern?
2) How capable is our current governance system?
3) Why do these capacity gaps persist?
4) How could governance capacity be strengthened?

Attention Framework

Applied framework

Global Heat Health Information Network self assessment tool to determine the maturity model for heat governance.

Target audiences

Experts working in heat governance on all levels, from county/municipality to the national scale

Afterwards

BSc thesis and PhD article based on analysis of input from surveys and feedback during discussions.

Who are we?

Su Li Heng – TU Delft
Srijith Balakrishnan – TU Delft
Namkyung Oh – Auburn University
Sean Vrielink – University Twente

Summary of the main findings

- This morning we asked: What is the problem?
- Then: How capable are we of addressing it?
- Then: What prevents or enables action?
- Finally: What could we do about it?

What next?

From our side:

- PhD student and BSc student working on their theses with the input from today as starting point
- All information from today will be shared in an online space. May we share your name, email address, and organization?

From your side:

- Use your mug/toolkit to initiate conversations about how to further mature heat governance within your organization, and outside organizations
- Reach out to us for collaboration on this framework, workshops, etc.

AUBURN UNIVERSITY UNIVERSITY OF TWENTE. TU Delft 4TU.

Share your experiences

Thank you!
